

Postdoc Cell and Chemical Biology

Would you like to be part of a ZON-MW project as a postdoc on developing strategies to stop the metastasis of malignant cancer cells and make them therapy-sensitive again? Then don't hesitate to apply for this great postdoc position!

In short:

- You will be part of our research group focused on studying signal transduction processes in human cells
- You will study the important role of TGF-beta in the epithelial to mesenchymal transition of cancer cells and investigate how we can use existing drugs to counteract the malignant behavior of mesenchymal cancer cells
- You have a PhD degree in cell biology/biochemistry or similar
